

Veriture Solution Set

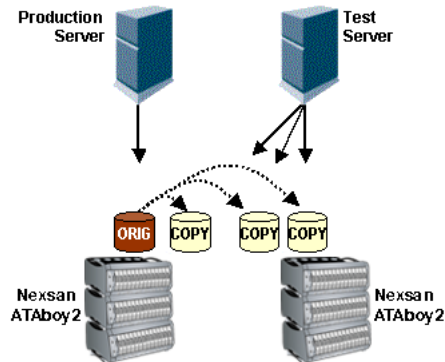

1. Centralized Storage Management With Veriture VSM

- Aggregates all available capacity into centrally managed pools
- Allocates appropriately-sized Volumes to each server
- Unused capacity remains in the pool for future requirements
- Additional capacity is dynamically and granularly allocated to any server on a just-in-time basis

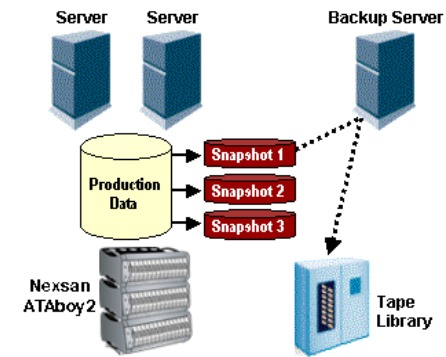

2. Accelerated Application Testing With Veriture MV and Veriture MC

- Creates instant, read/write copies of production data for testing purposes without taking applications offline
- Any-to-any data movement between production and test environments
- Allows multiple tests on multiple copies to occur in parallel
- Changes to test data do not affect production data

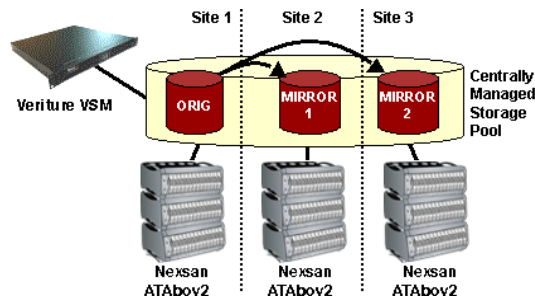

3. Zero-Window Backup & Rapid Restore With Veriture MV

- Backups can occur at any time of the day, using instant read/write disk-based snapshots of production data
- Production systems remain online and fully available during backup. Uses zero production server CPU cycles.
- Online snapshots reduce recovery times to minutes, and enable restores of application data to previous points-in-time.

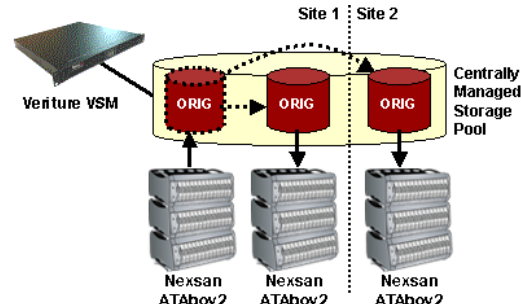

4. Nexsan's Veriture MM Snapshot-Enhanced, Any-to-Any Data Mirroring

- Affordable, vendor-independent solution that enables rapid recovery from both planned and unplanned downtime
- Any-to-any mirroring, from any device, to any device, to any location
- Integrates with Nexsan's Veriture MV and Veriture MC to create instant, read/write snapshots of mirrored volumes
- Local and remote mirroring (LAN, MAN and WAN)

5. Non-Disruptive, Any-to-Any Data Migration With Veriture MC

- Any-to-any data movement, both locally and remotely, from any device, to any device, to any location
- Migrates data while production applications remain online.
- Integrates with Nexsan's Veriture MV to create instant snapshots of migrating volumes for enhanced data protection.
- Centralized management of all migration activities
